

Solutions to the Creative Games

Thinking Outside the Box

Most people see that the dots make a square, so they think they can't make their lines go outside this box. However, the instructions don't place this limit. You can't solve the problem unless you go outside the three major lines that make up the triangle, as shown here.

A Different Perspective

You were told to cross out five letters to find one familiar word. Most people will try to follow this instruction by crossing out exactly five (5) letters. However, the way to solve the problem is to cross out the words *FIVE LETTERS*, which leaves you with *HELICOPTER*.
